

LOLER & PUWER Regulations 1998

Management Awareness

This course is designed for Senior Managers with overall responsibility for lifting equipment and operations, who may be required to delegate responsibilities and control projects and contracts.

This course is unique to the SCX Academy and will provide a full understanding of the difference between LOLER and PUWER, why companies with cranes or other lifting equipment need to comply with both, and how they can achieve this.

On completion of this course, delegates will understand exactly what is required of them under the latest Legislation, HSE Guidance and British Industry Standards; keeping both them and their company not only legal, but safe, efficient, and ultimately more productive.
